

## **AMENDMENTS TO THE CLAIMS**

Claim 1 (currently amended): A wrapping container for individually wrapping an interlabial pad, comprising:

a wrapping sheet container; and

a ~~separation portion~~broken line indicating perforations disposed on the wrapping sheet for completely separating or dividing the wrapping container into two ~~separated~~separate sections, wherein each ~~separated~~ separate section after the separation turns up to be an operation member for ~~wearing or removing~~is provided for inserting or removing said interlabial pad.

Claim 2 (currently amended): The wrapping container for individually wrapping an interlabial pad of claim 1, wherein said wrapping container comprises respectively a finger insertion portions for inserting fingers respectively in a portion becoming respectively an separated ~~for each separate section after the separation; and~~

in a state where said wrapping container is separated into respective separated sections at the separation portion, a fingers are inserted into the each finger insertion portions of respective separated sections which turn up to be an operation member for wearing or removing to insert and remove said interlabial pad.

Claim 3 (currently amended): The wrapping container for individually wrapping an interlabial pad of claim 2, wherein: said finger insertion portion comprises:

~~at least one mini sheet piece for a wrapping container attached to the wrapping container~~  
~~so that an opening for inserting a finger is formed,~~

~~two or more bonding portions in the wrapping container, and one or more non-bonding portions in the wrapping container;~~

wherein onesaid mini sheet piece for wrapping container is attached in a state striding across said broken line~~separation portion in on~~ said wrapping container, or said ~~mini-sheet pieces~~ one mini-sheet piece and one other mini-sheet piece are attached respectively on the separate ~~sectionsto both sides of said separation portion.~~

Claim 4 (Original): The wrapping container for individually wrapping an interlabial pad of claim 3, wherein said mini sheet piece for wrapping container is attached to an outer face side and/or an inner face side of said wrapping container.

Claim 5 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 2, wherein:

said wrapping container for individually wrapping an interlabial pad is a wrapping container for individually wrapping an interlabial pad which wraps an interlabial pad having a finger insertion opening; and

in addition to said separation section, the wrapping container for individually wrapping an interlabial pad is provided with a pre-unwrapped opening that allows the finger insertion opening of the interlabial pad contained therein to be exposed naturally at the beginning of unwrapping the wrapping container for individually wrapping an interlabial pad.

Claim 6 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 5, further comprises:

a series of wrapping sheet wound in a way to form an overlapping part where a part thereof is overlapped, or

a series of wrapping sheet superimposed in a way to form an overlapping part where both ends thereof are superimposed each other,

wherein said pre-unwrapped opening is formed of said overlapping part.

Claim 7 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 5, wherein:

said pre-unwrapped opening comprises:

a broken line whose both ends are connected to said separation portion, and

a tearing portion formed by tearing off a part of said wrapping container for individually wrapping an interlabial pad along the broken line; wherein the unwrapping is executed

Claim 18 (withdrawn): A wrapping container for individually wrapping an interlabial pad having a finger insertion opening, wherein:

the pre-unwrapping portion for unwrapping said wrapping container is unwrapped by tearing off a part of said wrapping container along a broken line introducing the position of said pre-unwrapping portion; and

the interlabial pad is contained so that said finger insertion opening is exposed first, in a state where said pre-unwrapping portion is unwrapped.

Claim 19 (currently amended): The wrapping container for individually wrapping an interlabial pad of claim 1, comprising a laminate material having a fiber sheet on anthe inner face side, and a film sheet on anthe outer face side.

Claim 20 (previously presented): The wrapping container for individually wrapping an interlabial pad of claim 1, comprising a biodegradable material and/or a water-soluble material and/or a water dispersible material.

Claim 21 (withdrawn): A wrapping body, comprising: an interlabial pad having a mini sheet piece for the interlabial pad forming a finger insertion opening where an opening of fingerbreadth is secured and a finger insertion space following the opening, and a wrapping container for individually wrapping an interlabial pad, wherein:

said interlabial pad is contained as folded so that said finger insertion opening opens when the pre-unwrapping portion is opened in order to open said wrapping container.

Claim 22 (Original): The wrapping body of claim 21, wherein said interlabial pad is contained, so that said mini sheet piece for said interlabial pad is folded toward the opposite side to the body side along the substantial central line in the longitudinal direction of said interlabial pad.

Claim 23 (Original): A wrapping body, comprising:  
an interlabial pad having a mini sheet piece for interlabial pad, the mini sheet piece having a finger insertion opening where an opening of fingerbreadth is secured and a finger insertion space following the opening, and

a wrapping container for individually wrapping an interlabial pad, wherein:  
said interlabial pad is contained in a direction orthogonal to said wrapping container for individually wrapping an interlabial pad.

Claim 24 (withdrawn): A wrapping body, comprising:  
an interlabial pad having a mini sheet piece for interlabial pad, the mini sheet piece having a finger insertion opening where an opening of fingerbreadth is secured and a finger insertion space following the opening, and  
a wrapping container for individually wrapping an interlabial pad, wherein:  
said interlabial pad is contained so that said finger insertion opening in said interlabial pad to be contained is positioned near the pre-unwrapping portion for unwrapping said wrapping container for individually wrapping an interlabial pad.

Claim 25 (Original): A wrapping container for individual wrapping of sanitary napkin, comprising a pocket portion for receiving interlabial pad in order to receive a used interlabial pad.

Claim 26 (new): A wrapping container for individually wrapping an interlabial pad, comprising:  
a wrapping sheet;  
a cutting line with perforations provided on the wrapping container for cutting the wrapping container; and  
at least one mini-sheet piece disposed on the wrapping sheet, said mini-sheet piece having a dimension that is smaller than the wrapping sheet and having an opening for inserting a finger.

Claim 27 (new): A wrapping container according to claim 1,  
wherein the mini-sheet piece is attached across the cutting line.

Claim 28 (new): A wrapping container according to claim 1,  
wherein two mini-sheet pieces are disposed on the wrapping sheet, and the two mini-sheet pieces are divided by the cutting line.
